

Recap

- What is type-1 vs type-2 error?
- What is the significance level α ? What is the p-value?

Statistical Design of Experiments

Chapter 2.1

Classical Design of Experiments

Comparative Experiments

	30y 112d	Age	36y 91d	
Babar Azam	Right hand Bat	Batting Style	Right hand Bat	Virat Kohli
Pakistan	Right arm Offbreak	Bowling Style	Right arm Medium	India
	Batter	Playing Role	Top order Batter	

Comparison with a number

Three cases of Hypothesis Testing

1. $H_0: \mu = \mu_0$, $H_1: \mu \neq \mu_0$

Example

H_0 : Sachin Tendulkar's ODI batting average is 50 runs

H_1 : Sachin Tendulkar's ODI batting average is **NOT** 50 runs

2. $H_0: \mu \geq \mu_0$, $H_1: \mu < \mu_0$

Example

H_0 : Sachin Tendulkar's ODI batting average is at least 50 runs

H_1 : Sachin Tendulkar's ODI batting average is **less than** 50 runs

3. $H_0: \mu \leq \mu_0$, $H_1: \mu > \mu_0$

Example

H_0 : Sachin Tendulkar's ODI batting average is at max 50 runs

H_1 : Sachin Tendulkar's ODI batting average is **greater than** 50 runs

How to draw statistical conclusions?

NOTE: You do NOT have permission to share this file or any of its contents with anyone else, and/or upload it on internet or any of the platforms where it can be accessed by others.

Comparative Experiments

- Comparing two processes/products/datasets
- Comparing a process/product/dataset with a reference

Case 1: When we have ALL the population data

Examples:

1. Who is a **better ODI batsman**, based on runs scored in an inning, **Sachin or MS Dhoni**?
2. Is Sachin's ODI average greater than 'X'?

NOTE: You do NOT have permission to share this file or any of its contents with anyone else, and/or upload it on internet or any of the platforms where it can be accessed by others.

Comparative Experiments

Case 2: What happens when we have PARTIAL population data?

Example

To test the newspaper claim that the mean wage rate of local foundry workers is \$16 an hour, 25 foundry workers were randomly surveyed. It was found that the average wage rate for the sample of workers was \$14.50. Historical data suggest that the wage rates follow the normal distribution and the standard deviation of wage rates is \$3. Can the Union claim that the average wage is not \$16 an hour? Assume $\alpha = 0.05$.

newspaper claim : $\mu = 16$

sample survey $n = 25$, $\bar{y} = 14.50$

we know $\sigma = 3$ (somehow)

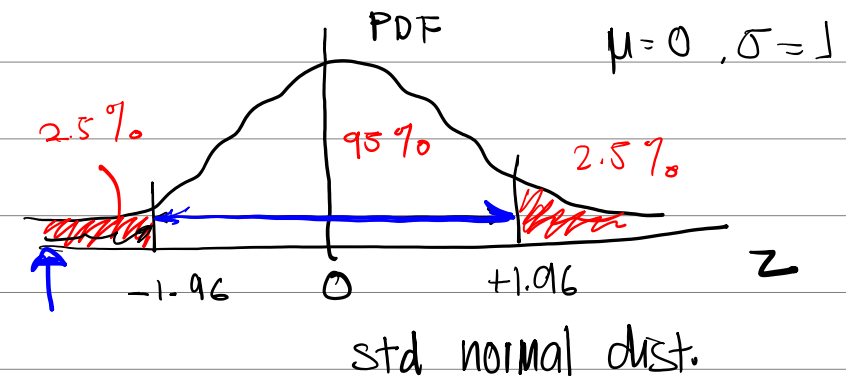

Hypothesis testing

✓ $H_0 : \mu = 16$ ✗

$H_1 : \mu \neq 16$ ✓

$$Z = \frac{\bar{y} - \mu}{\sigma / \sqrt{n}} = \frac{14.5 - 16}{3 / \sqrt{25}}$$

$$Z = \frac{-1.5}{0.6} = -2.5$$

NOTE: You do NOT have permission to share this file or any of its contents with anyone else, and/or upload it on internet or any of the platforms where it can be accessed by others.

Comparative Experiments

Example

$$\mu = 16 \quad (?) \quad \sigma = 3$$

$$14.5, 14.8, 16.8, 17.5, \dots$$

$$\bar{y}_1, \bar{y}_2, \dots, \bar{y}_n$$

CLT \Rightarrow

95% $\alpha = 5\%$
 99% $\alpha = 1\%$
 99.73% $\alpha = 0.27\%$

$\mu \pm 1.96\sigma$
 $16 \pm 1.96 \times 0.6$
 $[14.824, 17.176]$

How do you test for wage rate > 16 or wage rate < 16

$$H_0: \mu \leq 16$$

$$\bar{y} = 14.5$$

$$H_1: \mu > 16 \checkmark$$

$$[-\infty, 1.64]$$

14.5

$16 \pm 1.96\sigma$

$$\frac{\bar{y} - \mu}{\sigma/\sqrt{n}}$$

NOTE: You do NOT have permission to share this file or any of its contents with anyone else, and/or upload it on internet or any of the platforms where it can be accessed by others.

Comparative Experiments

Example 2: Who is a better player? Virat or Babar? ($\alpha = 5\%$)

Babar Azam
Pakistan

30y 112d

Right hand Bat

Right arm Offbreak

Batter

Age

Batting Style

Bowling Style

Playing Role

36y 91d

Right hand Bat

Right arm Medium

Top order Batter

Virat Kohli
India

Batsman	One sample each of 10 ODI innings	Sample Mean	<u>Assume</u> Known, Same Population Std
Virat	00, 53, 34, 31, 00, 54, 96, 20, 10, 19	31.7	29.6 28
Babar	12, 09, 91, 79, 51, 45, 41, 46, 29, 33	43.6	26.0 28
